

1. What are Data Structures?
2. What is the difference between a File Structure and a Data Structure?
3. What is a linked list?
4. Where are Data Structures primarily used?
5. What are the types of searching used in Data Structures?
6. How does binary search work?
7. How are individual elements accessed in an array?
8. What is a queue in Data Structures?
9. What is a binary tree?
10. What is the meaning of stack?
11. What is the working of LIFO?
12. What are multi-dimensional arrays?
13. Are linked lists Linear or Non-linear Data Structures?
14. What is a Binary Search Tree?
15. What is the meaning of FIFO?
16. What is the difference between void and null in Data Structures?
17. What is dynamic memory management?
18. What are push and pop operations in Data Structures?
19. How is a variable stored in memory when using Data Structures?
20. What is merge sort?
21. Why should heap be used over a stack?
22. What is the meaning of Data Abstraction?
23. What is the meaning of a post-fix expression in Data Structures?
24. What is the working of a selection sort?

25. What are signed numbers in Data Structures?
26. What are the minimum nodes binary trees can have?
27. What Data Structures make use of pointers?
28. What is the use of dynamic Data Structures?
29. What is a priority queue?
30. Pointers allocate memory for data storage. True or False?
31. What is the meaning of deque?
32. State the difference between Linear and Non-linear Data Structures.
33. What is the meaning of an AVL tree?
34. How does Huffman's algorithm work?
35. What are recursive algorithms?
36. How does bubble sort work?
37. Which is the fastest sorting algorithm available?
38. What is the postfix form of: $(X + Y) * (Z - C)$
39. Where are Tree Data Structures used?
40. What are the Data Structures that are used in graphs?
41. What are the Data Structures that are used in DFS and BFS algorithms?
42. What are the time complexities of linear search and binary search?
43. Where are Multi-linked Data Structures used?
44. What is the method used for inorder traversal in trees?
45. What is the working of post-order traversal in trees?
46. What are the disadvantages of implementing queues using arrays?
47. How can elements be inserted in the circular queue?
48. What is the use of void pointers?

49. What is the meaning of the stack overflow condition?
50. Have you earned any sort of certification to boost your Data Structures learning?

SMTA VITA
